

GRIFFINGUARD

multi-purpose window screens

Police Preferred Specification

GriffinGuard has been tested and certified by the LPCB to LPS 1174 Security Rating Level 1 for your peace of mind.

GriffinGuard has been designed to blend in with the architectural features of a building and is hardly visible from a distance but, up close, it is visible and strong enough to deter burglary and vandalism in order to protect property.

From the inside GriffinGuard allows 60% of available light to enter and allows visibility and airflow through the holes. In fact, GriffinGuard is one of the most unobtrusive forms of window security available.

GriffinGuard can be supplied with a hinge-away option that allows for cleaning of windows or a stand-off option that provides clearance for outward opening windows. The anti-graffiti finish option causes paint to 'bead' off rather than sticking and is supplied with a cleaning kit.

GriffinGuard's unique 3CR12 ferretic stainless steel mesh makes it durable and hard-wearing for the long term. Its high quality aluminium frame ensures that there are no rattles or movement and no fixings visible on the attack surface.

GriffinGuard features:

- Police Preferred Specification due to its attack testing and certification
- Salt spray tests show that GriffinGuard is less likely to rust than competitive products
- Quick and easy to install
- Less visually intrusive than most security grilles and screens
- May reduce noise and protect against flying objects

GriffinGuard frames are available in an attractive range of colours (as indicated below), utilizing high quality ultra violet resistant polyester powder coatings suitable for interior and exterior use. Additionally they can be supplied in any standard RAL number and can be matched to décor or corporate identity. Meshes are generally non-reflective matt black for optimum optical illusion. These colours are representative only. For an exact match please call for a swatch.

 yellow	 light brown	 burgundy	 red
 cream	 dark brown	 blue	 black
 sand	 light grey	 green	 white
	 dark grey		

Some technical information

Frame

- Aluminium with snap-on beading that completely covers all fixings on the attack surface.
- Available in a wide range of colour options.
- Extra firm grip on mesh to prevent rattling.
- Easy installation into the reveal or face-on.

Mesh

- 3CR12 Ferretic stainless steel mesh provides high residual strength and rigidity plus good corrosion resistance (as proven by salt spray tests).
- Whereas the integrity of the corrosion resistance of similar galvanised products is breached by the punching operation, the integrity of the stainless steel remains intact.
- Sizes up to 1300mm x 2500mm in a single piece for optimum rigidity. Pieces can be joined for larger windows.

Lock

- The hinge-away option may be secured with either a half or full cylinder lock depending on whether key access is required from one or both sides.
